

EF 777 Unipolar multi-function electrical tester

EF767 Unipolar multi-function electrical testers intended for performing basic test of 230V/380V electric installations, car installations and checking operations of electrical devices.

EF 777

- detection of live conductors (touchless) from 0,3 cm to 50 cm
- detection of wires inside walls at a depth of up to 10 cm
- detection of phase/ alternate zero max 500V
- testing of conduction continuity 1M Ω
- detection of direct voltage max 60V
- adjustment of detection sensitivity
